

MORNING FIRST-STEP PAIN GUIDE

Simple things you can do before getting out of bed to help make those **first steps** more comfortable.

WHY DOES IT HURT SO MUCH IN THE MORNING?

While you sleep, your plantar fascia is relatively unloaded. The moment you stand up, it suddenly has to support your full body weight. That's why those first few steps can be so painful.

THE GOOD NEWS

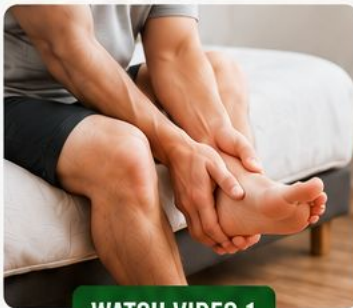

A few simple things before you get out of bed may help reduce that morning pain and set you up for a better day.

BEFORE YOUR FEET HIT THE FLOOR

1

LOOSEN UP BEFORE YOU STAND

Gentle seated stretching helps prepare the foot for the day ahead.

WATCH VIDEO 1

Helps improve flexibility

Reduces morning stiffness

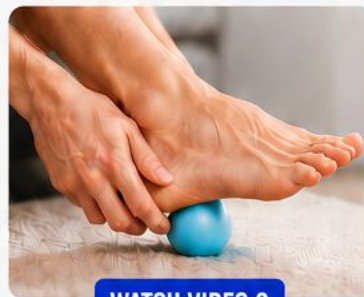

Prepares the foot for weight-bearing

2

CALM THINGS DOWN FIRST

Self-massage techniques help calm irritated tissue and reduce tension.

WATCH VIDEO 2

May reduce irritation

Promotes better blood flow

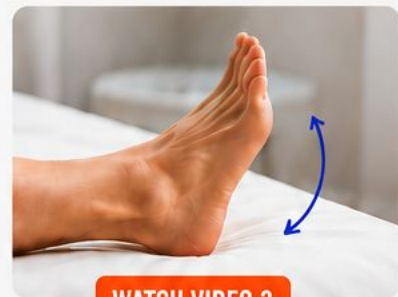

Supports tissue recovery

3

WAKE THE FOOT UP

Ankle ROM drills get blood flow moving and help warm up the foot.

WATCH VIDEO 3

Improves ankle mobility

Activates key foot muscles

Prepares you for your first steps

WHY DO SOME PEOPLE WAKE UP WITH PAIN EVERY MORNING?

Morning pain can be frustrating. But it doesn't always tell you what's actually slowing your recovery.

Some are doing too much.

Some are doing too little.

Some are stuck in the wrong approach.

Some need a different plan entirely.

The next step isn't more guessing.
It's understanding where you are right now.

WHY RECOVERY FEELS SO CONFUSING

Most people with foot and heel pain aren't lacking effort.
They're trying to follow advice that wasn't
designed for their specific situation.

TWO PEOPLE. SAME DIAGNOSIS. COMPLETELY DIFFERENT STRATEGIES.

One person may
need to do more.

Another may
need to
slow down.

One person may be
pushing through
pain.

Another may be
avoiding activity
completely.

That's why generic advice often falls short.

LET'S BE HONEST

- ✓ Most people don't have unlimited access to a therapist.
- ✓ Most people can't schedule an appointment every time symptoms change.
- ✓ Most people are trying to fit recovery around work, family, travel, and everyday life.
- ✓ Most people are tired of conflicting advice.
- ✓ Most people are tired of guessing.
- ✓ Most people just want to know what to do next.

BEFORE YOU DECIDE WHAT TO DO NEXT, IT HELPS TO UNDERSTAND WHERE YOU ARE RIGHT NOW.

That's why we use two clinical assessments to go beyond guesswork
and create a clearer picture of your situation.

RECOVERY PROFILE ASSESSMENT

Identifies recovery patterns,
habits, and roadblocks that may
be influencing your progress.

Focus: What's influencing
your recovery

FOOT AND ANKLE ABILITY MEASURE ASSESSMENT (FAAM)

A validated patient-reported outcome tool
used by physical therapists and orthopedic
specialists to evaluate function and disability
in people with leg, foot, and ankle disorders.

Focus: How your foot and ankle
are functioning in daily life

The more honest your answers, the more useful your results become.

AFTER COMPLETING THE ASSESSMENTS, YOU'LL DISCOVER:

Which recovery
profile best matches
your situation.

What may be
slowing your
progress.

Why certain advice
may have worked
for others
but not for you.

How your symptoms
compare to your
current level of
function.

What to focus
on next.

THE NEXT STEP ISN'T MORE GUESSING. IT'S UNDERSTANDING WHERE YOU ARE RIGHT NOW.

Take the Recovery Profile Assessment and the
Foot and Ankle Ability Measure (FAAM) now and get
personalized insights based on you.
