

PLANTAR FASCIITIS FLARE-UP GUIDE

Most plantar fasciitis flare-ups do NOT require complete rest.

During a flare-up, your foot's tolerance to load often temporarily decreases.

It means the movement needs to match your current level of tolerance.

DURING A FLARE-UP, AVOID:

- ⊗ Pushing aggressively into pain
- ⊗ Completely stopping movement
- ⊗ Testing pain repeatedly
- ⊗ Doing too much too soon

INSTEAD, FOCUS ON:

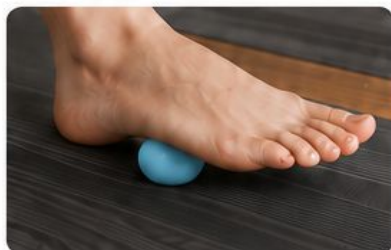

- ✓ Gentle movement
- ✓ Blood flow
- ✓ Lower irritability
- ✓ Gradual exposure

3 LOW-IRRITABILITY MOVEMENTS YOU CAN DO DURING A FLARE-UP

1

CALM THE TISSUE

Gentle massage + stretching to reduce irritation and calm sensitivity.

Helps calm irritated tissue and reduce tension.

Improves comfort and blood flow.

Move slowly. Stay below sharp pain. Stop if pain spikes.

2

ACTIVATE & STRENGTHEN

Gentle foot muscle activation and strength work to restore control and stability.

Activates the small muscles that support your arch.

Builds strength without overloading the foot.

Comfortable effort only. Quality over intensity.

3

ISOMETRIC HEEL HOLDS

Learn the importance of isometric heel holds and multiple ways to set it up for comfort.

Maintains load tolerance without irritating the tissue.

Supports healing while reducing flare-up intensity.

Multiple setup options to match your comfort level.
