THE PROGRESSIVE FOOT STRENGTH PROGRESS LOG

Objective Metrics for Intrinsic Muscle Development

CHASE THE DATA, NOT THE SENSATION.

The Foot Recovery Toolkit | Dr. Jonathan Schutza, PT, DPT

Session Log

Record each exercise immediately after completion

Date	Exercise	Sets x Reps	Load	Tempo	Pain (0-10)	Form Notes

Progress Rules

Increase Load: If completed all targets with RPE $\leq 6/10$ for 2 consecutive sessions and no pain increase → +10% weight or +2-4 reps

Keep Same: If met targets but RPE 7-8/10 or mild delayed ache → keep load, focus on form

Modify/Regress: If pain DURING $> 3/10$ OR sharp/radiating/tingling/swelling → stop, reduce load 30-50%, contact mentor

Form Priority: Never increase load if arch collapses or heel lifts early. Fix form first.

Weekly Summary

Complete at end of each week

WEEK OF	PLANNED SESSIONS	COMPLETED
_____	_____	_____
EXERCISES PROGRESSED	EXERCISES MODIFIED
