

7-Day Foot Pain & Activity Log

Think of this log as the "Flight Recorder" for your recovery. By the end of the week, you won't just have a list of symptoms: you will have a map of exactly what triggers your pain and what helps it settle.

How to Use Your Diagnostic Log

1. The Morning Baseline (The "Fuel Gauge")

The speedometer at the top represents your first 10 steps of the day.

- **The Goal:** Circle the number that matches your pain level the moment you get out of bed.
- **The Insight:** This is your most honest metric. If the needle points to a **high number (6-10)**, your tissue didn't recover overnight. This is a signal to keep today's activity "Low Cost" (house shuffling only).

2. The Activity Table (The "Input/Output" Log)

Fill this out as you go throughout your day. Do not wait until the evening, as small details often get forgotten.

- **Activity & Surface:** Be specific. Write "15m walk on sidewalk" or "10m standing on tile kitchen floor." The surface matters as much as the time.
- **Footwear Used:** Note if you were barefoot, in slippers, or in your structured sneakers.
- **Pain (30m Later):** This is the most critical column. Plantar pain is often a "latent" responder. You might feel fine *during* the walk, but the true cost of that walk shows up 30 minutes after you sit down.

3. Recovery Time to Baseline (The "Settling Period")

In the Daily Reflection section, record how long it took for a pain spike to return to your morning "Baseline" number.

- **Under 30 Minutes:** Your tissue is tolerating the load well.
- **Over 2 Hours:** You have "overdrawn" from your foot energy bank. You need to reduce the duration or intensity of that specific activity next time.

4. The "7-Page" Rule

Commit to filling out one full page every day for seven consecutive days.

- **The Weekly Audit:** On Day 8, lay all seven pages side-by-side.
- **The Search for Patterns:** Look for the "Red Threads." Do you always flare up on days you wear certain shoes? Does the pain settle faster on days you walk on grass instead of pavement?

The Golden Rule: We are looking for "Data, not Sensation." Don't worry if the numbers are high or low at first. The goal this week is simply to see the truth of how your feet interact with your life.

7-DAY FOOT PAIN & ACTIVITY LOG

Date _____

Morning Baseline

Time	Activity, Duration & Surface	Footwear Used	Pain (Now)	Pain (30m Later)

Daily Reflection

Pain Quality (examples): ☐ Sharp ☐ Aching ☐ Tingling
☐ Burning ☐ Numb ☐ Other _____

Recovery Time to Baseline: _____

Additional Notes: _____

Daily Summary: Worst Pain, Aggravators, Footwear Impact

7-DAY FOOT PAIN & ACTIVITY LOG

Date _____

Morning Baseline

Time	Activity, Duration & Surface	Footwear Used	Pain (Now)	Pain (30m Later)

Daily Reflection

Pain Quality (examples):
☐ Sharp ☐ Aching ☐ Tingling
