

PLANTAR FASCIITIS FLARE-UP GUIDE

Most plantar fasciitis flare-ups do NOT require complete rest.

During a flare-up, your foot's tolerance to load often temporarily decreases.

It means the movement needs to match your current level of tolerance.

DURING A FLARE-UP, AVOID:

- ✗ Pushing aggressively into pain
- ✗ Completely stopping movement
- ✗ Testing pain repeatedly
- ✗ Doing too much too soon

INSTEAD, FOCUS ON:

- ✓ Gentle movement
- ✓ Blood flow
- ✓ Lower irritability
- ✓ Gradual exposure

3 LOW-IRRITABILITY MOVEMENTS YOU CAN DO DURING A FLARE-UP

1 CALM THE TISSUE

Gentle massage + stretching to reduce irritation and calm sensitivity.

Helps calm irritated tissue and reduce tension.

Improves comfort and blood flow.

Move slowly. Stay below sharp pain. Stop if pain spikes.

2 ACTIVATE & STRENGTHEN

Gentle foot muscle activation and strength work to restore control and stability.

Activates the small muscles that support your arch.

Builds strength without overloading the foot.

Comfortable effort only. Quality over intensity.

3 ISOMETRIC HEEL HOLDS

Learn the importance of isometric heel holds and multiple ways to set it up for comfort.

Maintains load tolerance without irritating the tissue.

Supports healing while reducing flare-up intensity.

Multiple setup options to match your comfort level.

WHY DO SOME PEOPLE KEEP FLARING UP?

Two people can experience the exact same flare-up and need completely different guidance.

Some people are trying to stay active.

Some have tried everything already.

Some are afraid they're making things worse.

Some are trying to understand what's happening before it becomes a bigger problem.

The next step is identifying which recovery pattern best matches your situation.

FOOT PAIN DOESN'T AFFECT EVERYONE THE SAME WAY

People often assume they need better exercises.
What they usually need first is better clarity.

FOUR RECOVERY PROFILES

Which one sounds most like you?

FEELING LIKE NOTHING HAS WORKED

You've tried multiple treatments, exercises, or changes, but the pain keeps coming back.

 You're looking for answers that actually get to the root.

STAYING ACTIVE WHILE RECOVERING

You want to keep moving, exercising, or playing the sports you love without making things worse.

 You need guidance that helps you build tolerance and stay consistent.

LEARNING TO TRUST YOUR BODY AGAIN

Pain has created uncertainty, fear, or hesitation in your daily life.

 You're ready to feel confident and in control again.

GETTING AHEAD OF THE PROBLEM EARLY

You're looking for answers and want to prevent things from becoming more disruptive.

 You want the right information before small issues become big setbacks.

WHICH RECOVERY PROFILE FITS YOU?

Our Recovery Assessment helps identify:

- ✓ Which recovery profile best matches your experience
- ✓ What's most likely slowing your progress
- ✓ How your foot is currently affecting function
- ✓ What to focus on next for the best results
